

Create Issue on Transition

Introduction

This post-function allows you to create issues on transition, based on information provided in the transitioned issue. There's a possibility to create multiple issues at once, based on selected values from Select, Component, and Version multi-select fields.

Post function parameters

This post function takes the following parameters:

- **Summary** - new issue summary. Copy source issue summary option available
- **Description** - new issue description (optional). Copy source issue description option available
- **Project** - you can set Source issue project for a new issue to be placed on or select another project from the drop-down list
- **Issue type** - select issue type for new issue
- **Link to source issue** - create a link to source issue if needed
- **Reporter / Assignee** - can be set Current user, Source issue reporter or Source issue assignee. Click Pick user to select any another user from the list
- **Priority** - set a priority for a new issue
- **Select issue fields** - select which fields and custom fields will be added to the new issue. Choose needed field from the list that appears and click Add field
- **Create multiple issues** - allows creating multiple issues (up to 100). Iterating is possible over Issue fields such as Affects version/s, Component/s, Fix version/s, Labels, Sub-Tasks or Issue Custom Fields. Select Fixed issue quantity to set the desired number of issues to be created.
- **Other** - allows ignoring failure on issue creation.

Tags

Note: tags are case *insensitive*.

Tag	Description
\$\$FIELD_I D\$\$	Copy its value to any text fields available in an issue.
\$\$ISSUEKEY\$ or \$KEYY\$	Copy source issue key to any text fields available in an issue.
\$\$VALUE\$	Paste value of the current iteration of the <i>Iterate over</i> field. Example: <i>If you choose Component as a source of multiple issues, the post-function will create as many issues as there are Components in the parent issue, and if you use the \$VALUE\$ tag, each of the created issues will have the name of the component put in place of this tag.</i>
\$\$INDEX\$	Paste index of the current iteration of the <i>Iterate over</i> field. Example: <i>If selected to create a certain number of issues, the \$INDEX\$ tag will display the index of the current iteration in place of the tag.</i>
\$\$SIZE\$	Paste size of the <i>Iterate over</i> field. Example: <i>If selected to create a certain number of issues, the \$SIZE\$ tag will display the total number of iterations in place of the tag.</i>

Element summary	
Status	CURRENT
Version compatibility	6.0.1 - Latest
Supported	Yes
Introduced in version	2.1.0
